

Hope Hospital - Daily Work Report

Date: 15 May 2026 | Maintainer: Himanshu | Project: hopehospital.com

Focus of the day: Homepage SEO audit, complete PageSpeed performance overhaul (image WebP/responsive, a11y, forced-reflow fix), 5 new disease/condition pages with MedicalCondition schema, comprehensive Ayushman Bharat surgery list skyscraper page, blog index update, Common Diseases homepage section, and Google Search Console indexing requests for 6 new pages.

Image savings / page

1. Homepage SEO Audit & Optimization (index.html)

- Added **areaServed** schema to both Hospital and LocalBusiness JSON-LD: Nagpur, Kamptee, Wardha, Bhandara, Chandrapur, Amravati, Gondia, Vidarbha — helps hyperlocal and "near me" ranking signals.
- Removed 300+ character `<meta name="keywords">` tag — ignored by Google, leaked target keywords to competitors.
- Wrapped "Dr. B.K. Murali" in About section as a link to `/doctors/dr-bk-murali` — E-E-A-T author signal and internal PageRank flow.
- Added pill-link row below the 5 service cards linking to the 4 missing service pages: Neurosurgery, Laparoscopic Surgery, Maternity Hospital, Gastroenterology. **Result:** all 9 service landing pages now linked from homepage body.
- Tested adding "Best Hospital in Nagpur" H1 kicker — visually disconnected from brand tagline; reverted per user feedback.
- Added new **Common Diseases & Conditions** section (`id="diseases"`) with 8 cards linking to all disease pages (5 new + arthritis/diabetes/hypertension). Heart attack and stroke cards use red accents to signal emergency conditions.

2. PageSpeed Performance Overhaul

Score recovered from a temporary regression (98 → 93 → 98) after iterative fixes. Final score is excellent across all four categories.

Category	Score
Performance	98 / 100
Accessibility	100 / 100
Best Practices	100 / 100

2.1 Image Delivery (~137 KB saved per page-load)

- Converted `dr-murali-hero.jpg` (158 KB) → `dr-murali-hero.webp` at quality 75 (52 KB) — saves 106 KB on LCP image.
- Created mid-tier `dr-murali-hero-600.webp` (33 KB) for tablets and mid-desktop viewports.
- Used `imagesrcset` + `imagesizes` on preload `<link>` so the browser preloads the SAME image the `<img>` selects — fixed a 670ms "Resource load delay" caused by preload/srcset mismatch.
- Converted logo PNG (77 KB) → `new_hd_logo-removebg-preview.webp` at 440w (19 KB).
- Created additional 220w logo version (6.9 KB) for 1x DPR displays.
- Added **srcset 1x/2x** for logo across 74 references in 45 HTML files — retina displays still get sharp, 1x displays save bytes.

2.2 Accessibility & Best Practices

- Added `aria-label` + `name` attributes to appointment form inputs (name, phone, select) — resolves "Select elements do not have associated label elements".
- Added disambiguating `aria-label`s to 6 duplicate-href links (tel:+917122980073 x3, tel:+919823555053 x2, /contact fstrip-appt) — resolves "Identical links have the same purpose".
- Bumped `#faq-list summary` min-height 44 → 48px with flex alignment — fixes FAQ touch-target failure.
- Bumped `.footer-map-link` "Get Directions" to min-height 48px with larger padding — fixes touch-target failure.

2.3 Forced Reflow Eliminated (134ms → near zero)

- Root cause: scroll handler on homepage was re-querying the DOM and reading `offsetTop` for each section on every scroll event.
- First fix: cached DOM queries and `offsetTop` values, added `requestAnimationFrame` throttling and `{passive: true}` listeners.
- Final fix: replaced `offsetTop` scrollspy entirely with **IntersectionObserver** — modern API that fires asynchronously off the main thread with zero layout reads. Same visible behavior (navbar.scrolled toggle, active nav link highlight).

3. New Disease & Condition Pages (5 created)

Each page follows the existing template style with `MedicalCondition` + `BreadcrumbList` + `FAQPage` schema. Doctor-reviewed informational content (~1,500-2,000 words each) covering symptoms, causes, diagnosis, treatment options, prevention, and when to seek care.

Path	Specialty	ICD-10	Schema
------	-----------	--------	--------

/diseases/heart-attack	Cardiology	I21	MedicalCondition + FAQ + Breadcrumb
/diseases/stroke	Neurosurgery	I63	MedicalCondition + FAQ + Breadcrumb
/diseases/back-pain	Orthopedics	M54.5	MedicalCondition + FAQ + Breadcrumb
/diseases/kidney-stones	Nephrology	N20	MedicalCondition + FAQ + Breadcrumb
/diseases/gallbladder-stones	Gastroenterology	K80	MedicalCondition + FAQ + Breadcrumb

Sitemap updated with 5 new URLs at priority 0.9.

4. Skyscraper Content — Ayushman Bharat Surgery List 2026

- Created </blog/ayushman-bharat-surgery-list-2026.html> — ~3,500 word comprehensive guide.
- Full PMJAY surgery list across 12 specialties (Cardiology, Orthopedics, Oncology, Neurosurgery, Nephrology, Gastroenterology, OB-GYN, General Surgery, Pediatric, ENT, Ophthalmology, Plastic) — **150+ procedures listed**.
- Package amount table for 23 common surgeries with PMJAY rates (Knee replacement, CABG, Kidney transplant, etc.)
- 6-step claim process walkthrough.
- 12 FAQs with [FAQPage](#) schema.
- [BlogPosting](#) + [BreadcrumbList](#) + [FAQPage](#) structured data.
- Internal links to 15+ existing service, disease, department, and blog pages.
- Switched from initial green theme to red theme for consistency with other blog posts; removed all emoji prefixes from headings per project style.
- Added new card at top of [blog/index.html](/blog/index.html) grid.
- Sitemap entry at priority 0.95.
- **Purpose:** citeable link-magnet for natural backlinks from health bloggers and news sites covering government schemes.

5. Google Search Console — Indexing Requests

URL	Status (end of day)
/diseases/heart-attack	URL is on Google (indexed)
/blog/ayushman-bharat-surgery-list-2026	URL is on Google (indexed)
/diseases/stroke	Indexing requested

/diseases/back-pain	Indexing requested
/diseases/kidney-stones	Indexing requested
/diseases/gallbladder-stones	Indexing requested

All 6 URLs passed validation: Breadcrumbs + FAQ schemas detected, HTTPS confirmed, page indexable. 2 of 6 already crawled and indexed by end of day — same-day indexing.

6. Google Business Profile Posts (Week 1)

Day	Topic	Status
Day 1 (12 May)	Kidney Transplant — Service Highlight	Published (earlier)
Day 2 (15 May)	Kidney Warning Signs — Health Tip	Published today with custom infographic
Day 3 (16 May)	Ayushman Bharat Coverage — Trust & Scheme	Scheduled for 09:00 IST tomorrow

- Generated image generation prompts for Days 2 & 3 (ChatGPT image gen).
- Marked Day 2 as PUBLISHED in `gbp-posts-week1.html`.
- Recommended posting cadence: 09:00 IST daily for consistency and morning healthcare-search peak.

7. Git Commits — 15 May 2026 (10 commits pushed to main)

#	Hash	Commit Message
1	81c7fab	seo: optimize homepage H1, schema, internal links + mark GBP Day 2 published
2	505927c	revert: remove "Best Hospital in Nagpur" H1 kicker — visually disconnected from brand tagline
3	11cf813	perf+a11y: convert hero/logo to WebP, fix PageSpeed touch targets and form labels
4	51aa825	perf: shrink hero/logo further — add 600w mid-tier, lower hero q to 75, resize logo to 440w
5	ae58165	perf: add 1x/2x srcset for logo (220w + 440w) across all pages
6	31ba0ac	perf: eliminate forced reflow in scroll handler on homepage
7	18973b9	perf: replace offsetTop scrollspy with IntersectionObserver to eliminate forced reflow
8	6f1db02	fix: use imagesrcset/imagesizes on hero preload to match selection
9	e75faea	seo: add 5 disease pages + Common Diseases section on homepage

8. Files Created & Modified

Type	Count	Examples
New HTML pages	6	5 disease pages + 1 blog skyscraper
New WebP images	4	dr-murali-hero, dr-murali-hero-600, logo-440w, logo-220w
Modified HTML files	47+	index.html (multiple times), 45 files for logo srcset, blog/index.html
Modified CSS	1	css/styles.min.css (touch target fix for footer-map-link)
Modified sitemap	1	sitemap.xml (+6 new URLs)

9. Outstanding / Next Steps

Item	Status
Click REQUEST INDEXING for the 4 remaining disease pages in GSC	⚠ Action needed (~2 min)
GBP Day 3 auto-publishes 09:00 IST 16 May	Scheduled
Investigate the rejected GBP post	⚠ Check rejection reason
Add 5 more doctor profile pages	Blocked — needs real doctor names & credentials
NAP directory submissions to 16 directories (Practo, Lybrate, Justdial, etc.)	⚠ Manual user work — biggest local-pack lever
Press release drafts & PRNewswire distribution	⚠ External action when budget allows
Monitor Search Console for impressions/clicks over next 48-72 hrs	⚠ Observation
Plan GBP Week 2 calendar	⚠ Pending

10. Day Summary

Major productivity day. Site is now in significantly stronger SEO + performance shape:

- PageSpeed: 98 / 100 / 100 / 100 across all four categories — essentially as good as it gets.
- 6 new pages live, 2 already indexed by Google (same-day).
- Image payload cut by ~137 KB per page-load with responsive srcset for retina + 1x DPR.
- Forced reflow eliminated via IntersectionObserver.
- Common Diseases section drives traffic to all 8 disease pages from the homepage.

- Ayushman Bharat skyscraper page positioned for high-volume government-scheme queries.
- GBP daily posting on track — Days 1-3 done or scheduled.

Recommendation: let Google index the new content over the next 48-72 hours before planning the next sprint.
