

Hope Hospital - Daily Work Report

Date: 16 May 2026 | Maintainer: Himanshu | Project: hopehospital.com

Focus of the day: Worked through a complete TheHOTH SEO audit response, category by category (On-Page SEO, GEO, Usability, Performance). Fixed a site-wide text-encoding (mojibake) bug, improved web accessibility and the nephrology department page, advanced the Google Business Profile daily-post calendar, and strengthened off-site SEO foundations. 9 commits pushed to main.

Pages improved

1. Repository Housekeeping & Image Optimization

- Optimized `HOPE (1).jpg` (3.5 MB, 7132×4755) → `images/hospital.jpg` (129 KB) + `hospital.webp` — this created the image referenced by the Hospital JSON-LD schema on **12 pages**, which previously 404'd.
- Moved 3 GBP/AI infographics and the raw source image into a new `gbp-assets/` folder; added `gbp-assets/` to `.gitignore` so non-website assets stay out of the repo.
- Removed 4 auto-approve slash commands (`autonomous` , `deploy` , `proceed` , `yes`) that instructed the assistant to skip all confirmations — a safety improvement for a live site.

2. Google Business Profile

- Marked **Day 3** post (Ayushman Bharat Coverage) as PUBLISHED in `gbp-posts-week1.html` .
- Day 4** post (What is Endoscopy?) scheduled for Sunday 17 May; tracker date updated.
- Built the Day 4 endoscopy infographic — composited the **real Hope Hospital logo** onto the AI-generated graphic (replacing ChatGPT's redrawn, slightly-off logo) for brand accuracy.
- Drafted professional reply text for 9 recent Google reviews.

3. HOTH Audit — On-Page SEO (Grade A+)

- Fixed site-wide mojibake** — a text-encoding bug. 22 HTML files, ~70 corrupted characters restored: em/en dashes, rupee ₹ , arrow → , plus-minus, middle dot, superscript and degree signs; stray BOMs stripped. The audit flagged one file; a full-site sweep found it in 21 more.
- Trimmed **9 over-long blog titles** to ≤60 characters so they no longer truncate in search results; synced `og:title` / `twitter:title` to match.
- Added the missing **OG / Twitter meta block** to 4 blog pages (blog index + 3 posts) for correct social-share previews.

4. HOTH Audit — GEO / AI Optimization (Grade D)

- Created `llms.txt` — a curated, AI-readable site map (llmstxt.org standard) covering all 49 pages, so AI engines (ChatGPT, Claude, Perplexity, Google AI Overviews) can discover and cite Hope Hospital accurately. This was the single concrete fix the D-grade GEO section required.

5. Keyword Consistency — Homepage

- Keyword analysis showed "Ayushman Bharat" appeared 6× in homepage body text but in **no heading**. Added a new "**Ayushman Bharat & Cashless Treatment in Nagpur**" H2 section with a supporting paragraph and an internal link to `/empanelments`.

6. HOTH Audit — Usability & Performance (Grades A– / A–)

- **Usability:** Investigated the "avoid multiple page redirects" flag. The canonical URL loads with zero redirects; the 2-hop chain only affects the bare `hopehospital.com` entry and is Vercel platform behaviour. **No code fix needed.**
- **Performance:** Verified Brotli compression is active, the site serves **HTTP/3** (the audit's "outdated protocol" flag was a crawler artifact), images are optimized and there are no JS errors. The "inline styles" flag is low-value / high-risk — recommended against. **No code fix needed.**

7. Accessibility Fix

- A live PageSpeed Insights test (not part of the HOTH report) showed **Accessibility 96** with a colour-contrast failure: the homepage "Read guide" links used `#3BA1D7` — only **2.9:1** contrast, failing WCAG AA. Darkened to `#1a6fa8` (~5.4:1) — now passes.

8. Nephrology Department Page

- Trimmed the page `<title>` from 74 to 58 characters (no SERP truncation).
- Surfaced 3 FAQs that existed in the page's `FAQPage` schema but were not visible on the page (recognised transplant centre, dialysis insurance, CKD) — fixed a structured-data policy mismatch and added content depth targeting the nephrology keyword cluster.

9. Off-Site SEO

- Added YouTube to the homepage Hospital schema `sameAs`, and added a complete `sameAs` (Facebook / Instagram / YouTube) to the LocalBusiness schema — declares social profiles to Google for entity association.
- Refreshed the stale `BACKLINK_PLAN.md` — corrected the "Current State" (service, doctor, blog and disease pages all exist now), marked completed action items, and added Google reviews as the top priority.

- Analysed Google Search Console data: ~95% of organic traffic is **branded**; "best hospital in Nagpur" sits at position **26** (page 3); compiled the list of 13 striking-distance (position 11–20) keywords; flagged the **3.9★ / 400-review** polarised distribution (a large 1★ cluster) as the #1 growth bottleneck.

10. Git Commits — 16 May 2026 (9 commits pushed to main)

#	Hash	Commit Message
1	06a7dbc	seo: add hospital.jpg referenced by Hospital schema across 12 pages
2	d78a95b	chore: remove auto-approve slash commands, ignore gbp-assets, add 15may report
3	8193387	chore: mark GBP Day 3 published, reschedule Day 4 to 17 May
4	34463bd	seo: fix site-wide mojbake, trim long blog titles, add missing OG tags
5	31100d6	seo: add llms.txt for Generative Engine Optimization (GEO)
6	668096f	seo: add Ayushman Bharat section heading to homepage
7	4150609	seo: improve nephrology page — trim title, surface all 6 FAQs
8	36cb1f8	a11y: fix low-contrast 'Read guide' links on homepage
9	4432fbc	seo: add YouTube to schema sameAs, refresh stale backlink plan

11. Outstanding / Next Steps

Item	Owner / Status
Drive Google reviews — generate 5★ AND investigate/fix the 1★ cluster cause	⚠ Team — biggest lever
Complete Google Business Profile — add the missing phone number	⚠ Team (GBP dashboard)
Execute local citation submissions (LOCAL_CITATIONS_GUIDE.md)	⚠ Team
Execute backlink outreach (BACKLINK_PLAN.md — now refreshed)	⚠ Team
Publish GBP Day 4 (Endoscopy) on 17 May; continue daily posts	Scheduled
Re-run PageSpeed to confirm Accessibility 96 → ~100	⚠ Verify
Confirm GBP address format matches site NAP exactly	⚠ Team

12. Day Summary

A full SEO-audit response day. The TheHOTH audit was worked through end to end:

- On-Page SEO (A+)** — site-wide mojbake fixed, blog titles trimmed, OG tags added.
- GEO (D)** — `llms.txt` created for AI search engines.

- **Usability & Performance (A–)** — verified; the flags were non-issues, no code change needed.
- **Accessibility** — homepage contrast failure fixed.
- **Nephrology page** — title trimmed, hidden FAQs surfaced.
- **Off-site** — social schema strengthened, backlink plan refreshed, GSC data analysed.

Conclusion: the website is technically in good shape. The next real growth lever is off-site — Google reviews, local citations and backlinks — which now sits with the hospital team.
