

Daily Work Report — Hope Hospital SEO

04 June 2026 · hopehospital.com · Prepared for Dr. B. K. Murali

Summary: A heavy, full-surface day. Completed the entire **keyword-cannibalization cleanup** (5 fixes), an **AI-search (GEO) pass, accuracy/trust fixes** (review count synced to 3.9★/415, removed an inaccurate NABH year, swept unqualified "free" claims), crawl hygiene, a published GBP post, and several SEO-system documents. Caught & fixed a file-corruption issue from an editor setting. **14 commits pushed live; technical audit clean (0 urgent, 0 review).**

1. Keyword Cannibalization — Full Cleanup (pages were competing with each other)

Fix	What & why
/nagpur duplicate	A thin clone of the homepage targeting the same "best/multispeciality hospital in Nagpur" term was 301-redIRECTED to the homepage and removed. Stops splitting the #1 priority term.
Cancer (oncology vs blog)	Oncology dept and a blog were both titled "Free Cancer Treatment in Nagpur." Dept retargeted to specialist intent; the blog is now the single page for that query, with the dept linking to it. Signals consolidated.
Neurosurgery (dept vs service)	Near-identical "Brain & Spine" titles. Service retargeted to procedure/cost intent ("Brain Tumor & Spine Surgery — Cost"). No more overlap.
Knee & Kidney titles	Dropped "Cost" from the knee <i>service</i> title (cost-blog owns price intent) and "Transplant & Dialysis" from the nephrology <i>dept</i> title (service owns it). Clean intent split.

2. AI-Search / GEO (being the cited answer in ChatGPT, Gemini, Perplexity)

- Converted 19 section headings on 7 treatment pages to question form ("How much does X cost in Nagpur?", "What are the warning signs?") so AI engines can lift them into answers. Question-style headings rose from ~1 to 3–4 per page. **No new medical claims.**

3. Accuracy & Trust

- Review count synced 406 → 415 across 37 files (schema + visible stats) to match the live Google rating of **3.9★ / 415 reviews**. Rating unchanged. **Honest, accurate snippets.**
- Removed an inaccurate "NABH Accredited Since 2005" title on the About page (NABH is since 2012, hospital est. 2004) — dropped the year. **Accuracy fixed.**
- Swept 4 unqualified "FREE under Ayushman" claims → "covered for eligible cardholders" (knee & neurosurgery pages). **Avoids misleading patients.**

4. Crawl Hygiene

- Two internal GBP post print-sheets set to `noindex` (No-Tobacco-Day + June sheet) so they aren't indexed as thin pages; cleared the only audit red flag.
- Removed the June GBP sheet from the public site (404 + gitignored) and exported it as a device-only PDF, per request.

5. Google Business Profile

- Drafted 6 review replies for new 5★ reviews (published by the team).
- "Golden Hour" cardiac-emergency post published — heart-attack warning signs + Zion Cardiac Centre 24/7 cath lab. Phone-free body, Ayushman "free" qualified. **Live on GBP.**

6. SEO Operating System (internal docs — not on the public site)

- **Weekly performance report** generated from real Search Console data.
- **Content brief + ready-to-paste FAQ schema** for expanding the Ayushman hub with an "Is X covered?" cluster (parked pending PMJAY-desk figure sign-off).
- **AEO (Answer Engine Optimization) checklist** added to the system.
- **Learning loop reviewed** — closed 4 accuracy/technical changes as n/a; flagged 4 ranking changes as awaiting a fresh data export.

7. Issue Caught & Fixed

- **An editor auto-save setting was silently corrupting two files** (a "4→0" swap that broke the analytics ID and the 440026 pincode). Both files were restored from backup and the auto-save setting disabled. **Caught before going live.**

Result & Status

- Technical audit: **0 urgent issues, 0 review issues** (clean all day).
- **14 commits** reviewed and pushed live across the day.
- Google rating accurate at **3.9★ / 415 reviews** everywhere.
- Every change logged to the change-ledger for outcome measurement.

Next Steps

- Drop a fresh Search Console export (~25 June) so this period's changes can be measured.
- Confirm specialist doctors (cardiology, neurosurgery) as named medical reviewers — the biggest remaining ranking lever.
- Publish the Ayushman "Is X covered?" expansion once package figures are confirmed.
